Akshay Thakare

akshay-nanasaheb.thakare@capgemini.com

Experience Summary

- Highly skilled and motivated Cloud Data Engineer with experience in designing, building, and optimizing large-scale data pipelines and infrastructure. Proficient in utilizing big data technologies such as Hadoop, Apache Kafka, Spark, and Airflow. Experienced in cloud platforms like AWS and proficient in SQL, NoSQL databases, Linux, and Python
- Strong understanding of Spark Architecture including Spark Core, Spark-SQL, Data Frame, Datasets, RDD.
- Worked on multiple Migration Projects.
- Hands-on experience in Data Warehouses (Hive, Snowflake) - Managed tables, partitions, bucketing, micro-partitions, Hive UDFs, and optimization techniques.
- Worked with SQL, HQL & NoSQL databases such as MySQL, PostgreSQL, Apache HBASE, and ELK
- Designed, scheduled, and monitored Azure Data Factory pipelines. Reported ETL pipelines between internal and external data stores and optimizing data processing.

Key Skills

- **Big Data Technologies:** Apache Spark, Hadoop, EMR, Kafka, Databricks
- **Data Processing & Orchestration:** Apache Airflow, Oozie, Cron Jobs
- **Programming & Scripting:** Python (PySpark), SQL, Shell Scripting (Unix/Linux)
- **Databases:** SQL (MySQL, PostgreSQL), NoSQL (HBase, Elasticsearch, MongoDB)
- **Data Warehouses:** Hive, Snowflake (Partitions, Bucketing, UDFs, Optimization Techniques)
- **Cloud Services:** AWS (EC2, S3, IAM, RDS, Glue, EMR, Athena, Lambda), Azure (ADF, Databricks, Blob Storage), Azure DevOps, Delta Lake.
- **Containerization & DevOps:** Docker (Airflow, ELK, MongoDB, Kafka, Jenkins, MySQL, Ranger), Kubernetes
- **Data Governance:** Apache Ranger
- **Monitoring & Logging:** ELK Stack
- **Tools & Platforms:** Git, Azure DevOps, Visual Studio Code, JIRA

Experience

- Currently working as **Consultant (B2)** in **Capgemini** India Pvt. Ltd, Mumbai since **May - 2025**.
- Worked as **Sr. Developer** in **Tata Technologies Limited**, Thane, Mumbai from **Dec 2022 - May 2025**.

Projects

1.Type of Industry:	**Automotive**
Project Description:	Developed a scalable end-to-end data pipeline for processing large-scale streaming (1.5 TB daily) and transactional data using Apache Kafka, Spark, Python, and Aws services.
Role/Title:	Sr. Developer
Project Duration:	March 2024 – April 2025
Responsibilities:	• Designed real-time data ingestion pipeline from Kafka to MongoDB and MongoDB to ELK Index by using PySpark. • Enabled real-time data insights, enhancing fleet performance monitoring and decision-making. • Improved data processing efficiency, reducing ETL execution time by 40%. • Scaled data pipeline to handle high-volume streaming data with minimal latency.
Operating Systems:	Amazon Linux-2, Red-Hat
Software / Languages:	AWS, Hadoop, Python, Kafka, SQL, Spark, ELK, Hive, MongoDB, Airflow, Docker, Linux
Special Tools:	Apache Kafka.

2.Type of Industry:	**Automotive**
Project Description:	Developed a real-time fault detection and analysis system using Kafka, Python and ELK Stack to enable proactive customer engagement for vehicle fault resolution.
Role/Title:	Sr. Developer
Project Duration:	Oct 2023 – Feb 2024
Responsibilities:	• Processed fault signals and vehicle location data from Kafka topics • Performed real-time joins for enriched fault analysis. • Implemented real-time alerting and indexing using Elasticsearch. • Improved operational efficiency by enabling real-time fault tracking. • Reduced downtime and enhanced customer satisfaction through proactive issue resolution. • Provided vendors with data-driven insights for better customer service and predictive maintenance.

Operating Systems:	Amazon Linux-2, Red-Hat
Software / Languages:	Apache Kafka, PySpark, Elasticsearch (ELK Stack), MongoDB, Python, SQL
Special Tools:	Apache Kafka

3. Type of Industry **Automotive**

Project Description:	Developed a centralized document storage system using Big Data technologies to streamline document management, tracking, and retrieval for vendors and businesses.
Role/Title:	Solution Developer
Project Duration:	Dec 2022– Oct 2023
Responsibilities:	• Designed REST API for document metadata ingestion via Kafka. • Automated document storage and retrieval with AWS S3 and Elasticsearch. • Built a React-based UI for vendor document search and access. • Established a centralized and automated document storage system, improving accessibility and organization. • Improved vendor experience by providing instant file availability and download options through a user-friendly interface.
Operating Systems:	Linux/Unix, SAP, Windows
Software / Languages:	REST API, Apache Kafka, AWS S3, Boto3, Elasticsearch, React.js, Postgres, ELK
Special Tools:	React.js, Node.js

Training, Certifications & Affiliations

- Running Containers on Amazon Elastic Kubernetes Service (Amazon EKS)
- Snowflake[A-Z] Zero to Hero Masterclass(Core+SQL+API+Visual)
